

## HEALTH MANAGEMENT

The link between improved workforce health and improved productivity and profitability has been established. However, proving the ROI to justify ongoing investment remains a challenge, especially in tough times.

This is in part driven by the fact that health programs have traditionally been run on spreadsheets and the data stored in separate places.

By enabling the management of any health program to be completed in one place, and the data available for analysis, targeted interventions can be implemented based on identified health risk and the individual and business benefits tracked.

- ✓ Build & deliver your own health assessments.
- ✓ Design & manage any health & wellbeing program.
- ✓ Schedule and manage health surveillance activities.
- ✓ Auto schedule health services by location, occupation, department, employment type and individual.
- ✓ Email reminders.
- ✓ Capture health assessment results online.
- ✓ Case manage to improve health with actions, reminders & notifications.
- ✓ Track participation rates.
- ✓ Capture absenteeism data.
- ✓ Select health metrics to be reported and analysed.
- ✓ Maintain health service costs.
- ✓ Colour coded exception management.
- ✓ Use data to report and analyse trends.

**Average employee absence is 8.75 days per year at an annual cost of \$2,800 per employee.**

*(Direct Health Solutions, 2012 Absence Management Survey, Australia)*

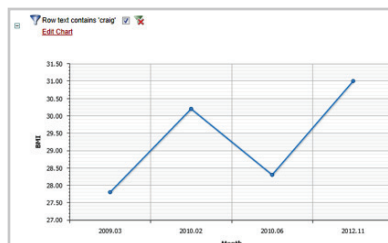

## ORGANISATIONAL BENEFITS

- ✓ Freedom to design your own assessments and change over time.
- ✓ Case manage individual health and set your own flags for early identification of worsening health trends.
- ✓ Aggregate data to identify health risks by location and occupation.
- ✓ Target health interventions where they are needed to address specific risks.
- ✓ Ensure your health \$ is being invested where it can make a difference.

### Manage workforce health byexception.

On the case managers' dashboard, actions are flagged by due date and status. Easy to identify what individuals or parts of the workforce need following-up. Book appointments, complete actions & contact individuals. Focus on the actions that will improve health.

### Engage individuals in improving health.

Data in 2CRisk is captured by individual by health metric. Individual health plans can be built and individual progress communicated.

### Aggregate data to target health risks.

Data can be aggregated to identify trends. Drill down by occupation, location, health metric or demographic to target risks & implement the right programs.
